

Optus 3G & 2G Coverage

 Voice, Data and Video On Street Coverage*

 On Street Voice, GPRS and SMS Coverage

 Car Kit with External Antenna Voice, GPRS and SMS Coverage

*You will require a UMTS 2100MHz compatible device to access the 3G network.

Please note that not all products & services are available in all locations within coverage areas. To check the availability of services in your area please call 1300 300 041.

Outside the 3G area, you will require a device capable of accessing GSM 900MHz. When within a 3G network area, your call or data session may also access the GSM/GPRS network if your handset supports GSM/GPRS 900MHz.

Optus prepares mobile coverage maps using the latest available data, tools and techniques to map Optus Mobile Network as accurately as possible.

However as with any network based on radio technology, handset quality or local conditions may prevent or interfere with mobile reception within coverage areas - e.g., inside concrete buildings, lift wells, basements, tunnels and road cuttings. High rise buildings may also suffer degradation of service and these maps are not an indication of in-building coverage.

Our coverage maps may show planned rollout. These predictions are based on rollout schedules available at the time of publication and they may be subject to change without notice should circumstances require.
