

Need help linking overseas offices

Call us now on 1300 393 835

Benefit from our experience networking international.

Many of our clients have international offices. And many of these clients trust Exetel to manage the difficult task of seamlessly connecting their overseas operations to their Australian MPLS network.

We are able to help you link any location in the world back to your Australian network through our upstream partners Singtel/Optus, Verizon, NTT, Vocus, and Tata.

Offices overseas? We understand your needs.

We have over eight years experience linking Australian sites to international destinations. In fact we have a number of overseas locations ourselves, all of which support our high volume residential and corporate data services in Australia.

Closer to home, Exetel buys connectivity from Vocus over the Southern Cross Cable System to access Chorus, and Vector copper and fibre services all over New Zealand. As we control the circuit from end to end, we can provide Quality of Service (QoS) over these links, which is perfect for applications such as VoIP, Video Conferencing, and Remote Desktop services.

So why not call us for a chat about your overseas network needs today on 1300 393 835.
